

Fire Safety
High 5
a safety checklist

- Install smoke and carbon monoxide alarms on each floor and inside and outside of every bedroom.
- Replace all smoke alarms every 10 years and test them according to product instructions. Consider installing models that contain a sealed-in, lithium battery that will power the unit for 10 years, eliminating low battery chirps and battery replacement.
- Place all matches and lighters up and away from young children and teach your kids not to play with them.
- Check the vents for the dryer, furnace, stove and fireplace outside your home to make sure they're clear of any snow or other debris.
- Practice an escape plan (see link below) with your family; know two ways out of every room and how to respond to the sound of a smoke alarm.
